SUMMARY

Full-stack developer and Software Engineering student (expected graduation 2028), coming from Civil Engineering. Co-founder of Merge, a sports platform with two web apps and a mobile app, where I work end to end: database, business logic, UI, testing and deployment, with a focus on concurrency and security. Looking for internship or junior developer roles in Florianópolis (on-site or hybrid) or remote.

EXPERIENCE

Co-founder & Full-Stack Developer · Merge Wellness

Sep 2025 - present · Remote

Sports platform with three products and a single user account: tournament and ticketing management for clubs, a platform for coaching businesses, and an app for athletes. 340+ commits and 60+ pull requests.

- Designed the PostgreSQL database on Supabase (one schema per product, nothing exposed via the public API, separate dev and prod environments, versioned migrations) and led the production cutover of both web platforms.
- Ticketing: a per-event PostgreSQL lock that prevents overselling, per-buyer purchase limits, sales enabled only for approved payout accounts, and transactional emails.
- Fixed 4 broken access control (IDOR) flaws, 3 of them across clubs; moved role-based permissions to server-side enforcement and introduced automated tests with Vitest.
- Built core features: on the coaching platform, multi-step sign-up, coach and group management, subscription plans and invites; on the club platform, seeded elimination brackets and automatic tournament status.
- Created the identity layer shared by all three products, published as an internal npm package.
- Shipped real-time updates with Pusher (private channels, deny by default) and notifications in the React Native (Expo) app, where I also prepared the app store release.
- Automated deployments with a backup and a destructive-SQL guard before every migration; added security headers plus secret and dependency scanning in CI.
- Business: defined pricing plans and fees with my co-founders and led the payment partner's security questionnaire (70 controls), including policies and a database restore test.

Co-founder & Full-Stack Developer · QuadraON

Sep 2024 - Nov 2025 · Remote

- Sports court booking and management platform. Came up with the idea and owned the architecture and end-to-end development (Next.js, TypeScript, Prisma, MongoDB, Clerk, AWS S3).
- Hourly and day-use bookings, automatic weekly slot generation, time zone handling and guest checkout.

Earlier career · Civil Engineering

- COESA Construtora Oeste:** Civil Engineer (Nov 2023 - Feb 2026) and Assistant Civil Engineer in project design and management (Jan 2019 - Apr 2021).
- TIG Flooring,** Maine (USA): Team Manager, handling finances and the crew (Oct 2021 - Feb 2022); previously flooring installer (Jun - Oct 2021).
- COPASA:** Civil Engineering Intern in the wastewater treatment division (Jul - Dec 2018).

EDUCATION

Bachelor's in Software Engineering · Descomplica Faculdade Digital · 2024 - 2028 (expected)

Bachelor's in Civil Engineering · Centro Universitário UNA · 2018 - 2021

CERTIFICATIONS

Descomplica: DB Developer (160 h) and Object-Oriented Developer (240 h)

Codecademy: Front-End Engineer

Rocketseat: NLW Unite

SKILLS & LANGUAGES

Programming: TypeScript, JavaScript, SQL

Front end: React, Next.js, React Native (Expo), Tailwind CSS, React Hook Form, Zod

Back end & data: Node.js, Express, PostgreSQL, Prisma, Supabase, MongoDB, REST APIs, Pusher

Infra & tools: Vercel, GitHub Actions, Docker, AWS S3, Clerk, Asaas, Vitest, Git, Claude Code

Languages: Portuguese (native), English (professional working proficiency; worked in the US), Spanish (intermediate)
